

SHD100/SHD101

Humidity Transmitter for Duct Mounting 0-10 V/4-20 mA

SHD100 is an active sensor, which measures the relative humidity (%RH) and converts the measurement into an electric current 4–20 mA or a voltage level 0–10 V.

The transmitter is delivered as a complete unit, comprising an aluminum mounting flange with the sensing element and an amplifier mounted in a separate housing.

The SHD100-T is equipped with passive temperature elements - user selectable NTC 1.8 or 10 k Ω . The NTC 1.8 k Ω is for Vista products, while the NTC 10 k Ω is for I/NET products.

The SHD100-T5 is equipped with passive temperature elements - user selectable NTC 1.8 or 10 k Ω . The NTC 1.8 k Ω is for Vista products, while the NTC 10 k Ω is for continuum products.

The SHD100-T6 incorporates the 5.02 k Ω NTC network (@ 25 $^{\circ}$ C) for use with Satchwell products and BMS systems.

All SHD100 products are intended for immersion installation and can be used for relative humidity measurement in air ducts.

INSTALLATION

4-20mA

Note! The wires must be connected in the correct way.

The sensor must not be touched since it is sensitive to mechanical damage and to grease etc. from the fingers.

The transmitter is connected with a 2-wire cable. The current is proportional to the measured humidity and it is measured over an external load resistance R_L . The supply voltage U_M is a function of the voltage across the room transmitter U_G and the voltage drop across the load resistor and the wire resistances.

0-10V

The transmitter is connected with a 3-wire cable. If another load is to be connected close to the sensor, this should be made with a separate G_0 , so that the measuring signal will not be affected.
